

# Dwellings and Housing Conditions

2020, overview

## Three out of five persons aged under 40 live in rented dwellings

Living in rented dwellings has increased during the 2010s. According to Statistics Finland, living in rented dwellings has increased most among household-dwelling units of persons under the age of 40, but the share of those living in rented dwellings has also increased among household-dwelling units aged between 40 and 74. At the end of 2020, altogether 34 per cent of all household-dwelling units lived in rented dwellings, which is four percentage points more than in 2010.

**Household-dwelling units living in rented dwellings by the age of the oldest member in 2010 and 2020, share of household-dwelling units in the same age group (%).**

In 2020, a total of 61 per cent of the household-dwelling units aged under 40 in Finland lived in rented dwellings, while the share was 52 per cent in 2010. Rental living has grown most among household-dwelling units in the 25 to 29 and 30 to 34 age groups, where the share of renting household-dwelling units increased by around 10 percentage points. During the 2010s, the share of those living in rented dwellings decreased only among people aged 75 or over.

For young people living independently, rental living is clearly more common than owner-occupancy; nearly 90 per cent of household-dwelling units of under 25-year-olds live in rented dwellings. Young people move more often than others, and as life situations change, living in rented dwellings is more flexible than owner-occupancy. Living in rented dwellings is more common among young people in urban municipalities, where 89 per cent of household-dwelling units of persons under the age of 25 live in rented dwellings. In rural municipalities the share is 67 per cent.

Rental living becomes rarer with age, around one in four household-dwelling units of persons over the age of 40 lived in rented dwellings at the end of 2020.

## Average size of new dwellings in blocks of flats has decreased in ten years

The average size of new dwellings in blocks of flats has decreased during the 2010s especially as concerns rented dwellings. Rented dwellings completed in blocks of flats in 2020 are an average of nine square metres smaller than those completed in 2010. Over the same period, the average floor area of owner-occupied dwellings built in blocks of flats has decreased by around seven square metres. The comparison takes into account occupied dwellings in blocks of flats.

In 2020, dwellings completed in blocks of flats were slightly larger than those completed in the year before. The average floor area of new rented and owner-occupied dwellings started to grow for the first time since 2013.

### Average floor areas of occupied rented and owner-occupied dwellings completed in blocks of flats in Finland by year of completion, square metres.

The decrease in the average size of dwellings in blocks of flats during the 2010s is not solely explained by the grown production volumes of smaller types of dwellings, because floor areas by type of dwelling have also decreased. For example, occupied rented 2-bedroom dwellings completed in blocks of flats in 2020 are, on average, nearly six square metres smaller than those completed in 2010.

The size difference between new owner-occupied and rented dwellings has grown in ten years. Owner-occupied dwellings completed in blocks of flats in 2020 are nearly 20 square metres larger than rented dwellings, while the difference for dwellings built in 2010 is around 18 square metres.

The average floor area of new rented dwellings has diminished more in the six biggest towns than elsewhere in Finland. In the biggest towns, occupied rented dwellings in blocks of flats completed in 2020 are, on average, nearly 10 square metres smaller than those completed in 2010, while in the rest of Finland the average size has decreased by slightly over seven square metres.

# 1. Dwelling stock 2020

## 3 million dwellings

At the end of 2020, there were 3,124,000 dwellings in Finland, of which 358,000 were without permanent occupants. The dwelling stock went up by 49,000 dwellings from the previous year. From 1990, the building stock has increased by 931,000 dwellings, or by about 31,000 dwellings per year. Compared to 1990, 201,000 more dwellings were without permanent occupants. The growth in the building stock has been slowing down from the preceding decade. Most dwellings have been built in the 1970s- and 1980`s. Residential building construction has centred in urban municipalities. In all, 80 per cent of the dwellings completed in the 1995 to 2020 period are located in urban areas.

## 47 per cent of all dwellings are in blocks of flats

As recently as 1990, the numbers of dwellings in detached houses and blocks of flats were still almost equal. At that time, dwellings in blocks of flats numbered 939,000 and those in detached houses only 4,000 fewer. The share of dwellings in blocks of flats grew over the 1990s, however. At the end of 2020, 47 per cent of all dwellings were in blocks of flats, i.e. 1,468,000 which is 289,000 more dwellings in blocks of flats than in detached houses. The number of terraced houses has grown over tenfold since 1970. In 1970 they numbered only 30,000 but the figure had gone up to 420,000 by the end of 2020.

## The number of blocks of flats with no lift relatively high

Since 2005 lift has been mandatory in new blocks of flats that have three storeys or more. Between 1995 and 2004 lift was mandatory in new blocks of flats that have four storeys or more. The number of blocks of flats with more than three storeys was around 26,500, of which 2,200 had no lift. Dwellings in blocks of flats with more than three storeys and no lift numbered 64,000 and had 85,000 occupants, of whom 14,000 were aged over 65. It was even less usual to have a lift in a three-storey building. 24 per cent of the 355,000 dwellings in buildings with three storeys were in blocks of flats with a lift. In all, 362,000 Finns, of whom 76,000 were aged over 65, lived in three-storey buildings with no lift.

## 35,800 dwellings were completed in 2020

In 2020, a total of 35,800 dwellings were completed, of which 6,300 were in detached houses, 2,900 in terraced houses and 26,300 in blocks of flats. Approximately 13,100 new dwellings were completed in Greater Helsinki, 11,300 of them in blocks of flats. 65 per cent of new dwellings in blocks of flats were rented dwellings at the end of 2020.

**Figure 1. Dwellings completed in 2020, number**

New blocks of flats completed in 2020 had over 15,200 rented dwellings. Around 4,400 of these were interest-subsidised rented dwellings supported by the state. Government-subsidised rented dwellings do not here include rented dwellings with short-term interest subsidy loans, or of the so-called interim model.

## Average floor area of dwellings varies a lot

In 2020 the average floor area of a dwelling was 79.4 square metres. The average floor area of the dwelling stock has grown by about 20 square metres since 1970. The average floor area of a one-room unit was 34 square metres, that of a two-room unit 54 square metres, and that of a three-room unit and a kitchen 79 square metres. Despite the growth in the average size of dwellings, there were about 145,000 dwellings of under 30 square metres. In contrast, only 27 per cent of dwellings have a floor area of over 100 square metres. There are 481,000 one-room units with a kitchen or kitchenette, i.e. 15 per cent of the dwelling stock. The most common type of dwelling is a two-room unit. There are 938,000 two-room units with a kitchen or kitchenette, i.e. 30 per cent of the dwelling stock.

**Table 1. Floor area per dwelling (m<sup>2</sup>) by type of building in 1970–2020**

Year	Type of building				
	Total	Detached houses	Attached houses	Blocks of flats	Other buildings
1970	60,0	66,0	73,0	51,0	54,0
1980	69,3	83,6	71,7	54,8	55,5
1990	74,4	95,3	70,2	55,8	59,7
2000	76,5	101,9	70,0	56,1	59,8
2010	79,5	108,4	71,2	56,5	60,7
2015	80,0	111,0	71,3	56,4	60,9
2019	79,3	112,3	71,4	55,6	60,3
2020 <sup>1)</sup>	79,4	112,8	71,3	55,5	61,8

1) The type of building is formed based on the Classification of Buildings 2018.

The average floor area of an owner-occupied dwelling was 97 square metres and most of them are in detached houses. The average floor area of a rental dwelling was 52 square metres and most of them are in blocks of flats. In the dwelling stock statistics the tenure status is mainly defined for permanently occupied dwellings. The tenure status is also defined for a dwelling not permanently occupied when a dwelling is located in a rented dwelling subsidised by the state or a dwelling is temporarily occupied. Of all dwellings, the number of rented dwellings was more than a million at the end of 2020 and 953,000 of them were permanently occupied dwellings. The number of permanently occupied rented dwellings has grown by 212,600 since 2000.

## Number of non-subsidised rented dwellings increased further in 2020

According to Statistics Finland, a total of 40,700 new dwellings were completed in 2020, of which 51 per cent were rented dwellings. Around 13,100 of the completed dwellings were new non-subsidised rented dwellings, and interest-subsidised rented dwellings were 4 900. Of the buildings completed in this decade approximately three times more are non-subsidised rented dwellings than interest-subsidised ones. Thirty-two per cent of these non-subsidised rented dwellings and 45 per cent of interest-subsidised rented dwellings are in Greater Helsinki.

## 2. Household-dwelling units and housing conditions 2020

### Average size of a household-dwelling unit 1.96 persons

The number of household-dwelling units with one and two persons has been growing for several decades, being 78 per cent of all household-dwelling units at the end of 2020. At the end of 2020, the total number of household-dwelling units was 2,767,000, of which 1,254,000, i.e. 45 per cent, were single-person household-dwelling units. In 2020 the average size of a household dwelling unit was less than two persons, while in 1970 it was still three persons.

**Figure 2. Number of household-dwelling units by size in 1970–2020, number**

The size of a household-dwelling unit varied regionally. In urban municipalities the average size of a household-dwelling unit was 1.92 persons and in rural municipalities 2.04 persons. The structure of household-dwelling units differs between rural and urban areas. The share of one-person household-dwelling units is larger in urban areas (47%) than in rural areas (41%).

### Around one half of Finns live in detached houses

Around one half of Finns live in detached houses, although only 38 per cent of permanently occupied dwellings are in detached houses. Terraced houses had 375,000 occupied dwellings, that is, 14 per cent of the dwelling stock. Of all occupied dwellings 47 per cent were in blocks of flats, although one third of the population live in blocks of flats. The explanation is that dwellings are smaller in blocks of flats, so smaller families or household-dwelling units live in them than in terraced or detached houses.

**Table 2. Household-dwelling units and persons by type of building in 2020**

Type of building	Household-dwelling units	%	Persons	%
Buildings total	2 766 679	100	5 411 922	100
Detached and semi-detached houses	1 055 778	38,2	2 599 728	48,0
Attached houses	374 670	13,5	716 105	13,2
Blocks of flats	1 294 260	46,8	2 027 141	37,5
Other buildings	41 971	1,5	68 948	1,3

One household-dwelling unit had around 81 square metres of living area at its disposal, or 41 square metres per person. The floor area per person diminishes considerably as the size of the household-dwelling unit grows. The average area available for a single person living alone was 60 square metres, a two-person household-dwelling unit had 45 square metres per person but a household-dwelling unit of six persons had no more than 21 square metres of floor area per person.

**Table 3. Floor area per person (m<sup>2</sup>) by size of household-dwelling unit in 1985–2020**

Year	Number of persons							
	All household-dwelling units	1 person	2 persons	3 persons	4 persons	5 persons	6 persons	7+ persons
1985	28,9	48,6	34,3	27,6	24,1	21,2	18,7	15,2
1990	31,4	51,8	37,0	29,4	25,0	21,7	19,0	14,8
1995	33,4	54,0	39,2	30,4	25,3	21,9	19,0	15,0
2000	35,3	55,6	40,8	31,4	26,0	22,5	19,4	15,4
2005	37,5	57,0	42,4	32,3	27,3	23,7	20,4	16,3
2010	39,1	58,6	43,6	33,0	28,2	24,4	21,0	16,9
2015	40,1	59,8	44,3	33,4	28,3	24,6	21,0	16,9
2016	40,3	60,0	44,4	33,5	28,3	24,5	21,0	16,8
2017	40,5	59,9	44,6	33,6	28,3	24,5	20,9	16,8
2018	40,8	59,8	44,8	33,6	28,4	24,5	20,8	16,8
2019	41,0	59,8	45,0	33,7	28,4	24,4	20,8	16,8
2020	41,3	59,8	45,2	33,8	28,4	24,4	20,8	16,9

## Almost one in five Finns lives in an overcrowded dwelling

At the end of 2020, the number of household-dwelling units living in overcrowded dwellings was 210,000 and the total number of persons living in such dwellings was 870,000. A household-dwelling unit is defined as living in an overcrowded dwelling if it consists of more than one person per one room of its dwelling, so a person living alone cannot be regarded as living in an overcrowded dwelling. 16 per cent of housing population lived in an overcrowded dwelling. In 2020 the number of overcrowded household-dwelling units has again decreased by around 4,900 and the number of persons living in overcrowded dwellings decreased by around 21,100.

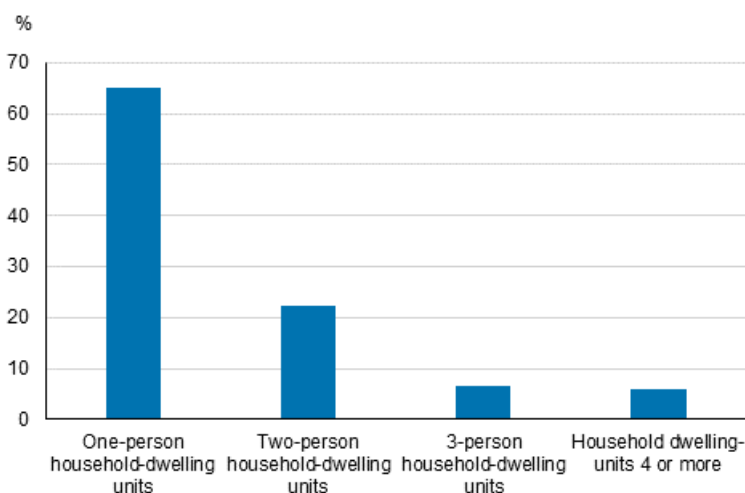

Owner-occupied dwellings have more living space than rented dwellings, when measured by floor area per person. The average floor area per persons of a household-dwelling unit living in an owner-occupied dwelling is 45 square metres, while a unit living in a rented dwelling has only 33 square metres of floor area per person.

Of rental dwellings, non-subsidised rented dwellings had the most floor area per person, 34 square metres. Differences to other rental dwellings were not large. In government-subsidised rented dwellings the floor area was 32 square metres per person. In right-of-occupancy dwellings the living space per person was 34 square metres.

## Mainly household-dwelling units of one to two persons in rented dwellings

The majority of those living in rented dwellings, 87 per cent, were living alone or together with another person, while in owner-occupied dwellings the corresponding share was 73 per cent. Six per cent of the household-dwelling units living in rented dwellings and 16 per cent of those living in owner-occupied dwellings were larger household-dwelling units with at least four persons. At the end of 2020, the number of permanently occupied rented dwellings was around 953,000, and 304,000 were government-subsidised or interest-subsidised rented dwellings and 649,000 dwellings were privately financed.

**Figure 3. Rented dwellings by size of household-dwelling unit in 2020, (%)**

In all, 2,767,000 dwellings were permanently occupied at the end of 2020. Over one half of good one million permanently occupied dwellings in blocks of flats were rented dwellings. Around 122,000 dwellings were rented in terraced houses, being about one third of occupied dwellings in terraced houses. Detached and semi-detached houses had 39,000 rented dwellings.

### One quarter of the population live in rented dwellings

The proportion of rented dwellings of all permanently occupied dwellings was 34 per cent, 1.5 million, more than one quarter of the population, lived in rented dwellings. In rented dwellings there are smaller household-dwelling units than in owner-occupied dwellings. At the end of 2020, the total number of permanently occupied rental dwellings was around 953,000, of which 32 per cent were government-subsidised or interest-subsidised rental dwellings. The share of government-subsidised or interest-subsidised rental dwellings of all permanently occupied rental dwellings decreased, as dwellings freed from restrictions. And that is part of the reason why other rental dwellings has increased. At the end of 2020, there were 49,000 right-of-occupancy permanently occupied dwellings in Finland. Forty-six per cent of them are located in Greater Helsinki.

**Figure 4. Dwellings by tenure status in 1960–2020.**

Renting is a tenure status preferred by young household-dwelling units in particular. As the age of the oldest person of a household-dwelling unit goes up the proportion of those living in rented dwellings goes

down. In all, 79 per cent of the household-dwelling units with the oldest person aged under 30 and 40 per cent of those with the oldest persons aged 30 to 44 lived in rented dwellings, while only 24 per cent of the household-dwelling units where the oldest person was aged 45 to 74 did so. The household-dwelling units where the oldest person was aged 45 to 74 were the most likely to own their house. Forty-three per cent of the households-dwelling units meeting this age criterion were owner-occupiers of detached houses. In contrast, when the oldest person in the household-dwelling unit was older than this, owning a house was less likely. The most common mode of dwelling at a later stage in life was an owner-occupied flat in a housing company.

# Appendix tables
