

# Consumer Confidence

2021, June

## Consumer confidence strongest in over three years

In June, the consumer confidence indicator (CCI) stood at 4.6, while in May it was 2.7 and in April 3.8. The figure for June is highest since February 2018 (4.9). Last year in June, the CCI received the value -3.9. The long-term average for the CCI is -1.8. The data are based on Statistics Finland's Consumer Confidence Survey, to which 956 persons resident in Finland responded between 1 and 17 June.

Consumer confidence indicator (CCI)

Of the four components of the CCI, expectations concerning consumers' own economic situation in 12 months weakened slightly in June to May. By contrast, the estimate of the present state of their own economy and expectations concerning Finland's economy improved clearly. Intentions to spend money on durable goods in the next 12 months remained unchanged in June. Compared with June last year, all four components of the CCI were now on a better level, especially expectations concerning Finland's economy.

Of the components of the CCI, both views concerning consumers' own economy and intentions to spend money on durable goods were very strong in June. The views concerning the future development of Finland's economy were also bright.

## Consumers' expectations concerning their own and Finland's economy in 12 months' time

Consumers' expectations concerning the development of the general unemployment situation in Finland also became ever brighter in June. This was also more or less the case for views of the personal threat of unemployment or temporary lay-off experienced by employed, that is, wage and salary earners and self-employed persons at the time of the survey. In June, consumers' estimates of the growth rate of consumer prices over the coming months remained unchanged, close to their long-term average.

In June, consumers considered their own financial situation to be still excellent. The time was regarded very favourable for saving and also moderate for taking out a loan and buying durable goods. Saving possibilities were expected to be still high in the coming months.

In June, considerably many still intended to take out a loan within one year. As in the past few months, consumers also had considerably plenty of plans to buy a dwelling. In addition, very many considered buying a car in June during the next 12 months and there were a great deal of plans to renovate the dwelling.

### Consumer confidence by major region and population group

In June, consumers' confidence in the economy was very strong in Greater Helsinki (CCI 5.3) and especially elsewhere in Southern Finland (9.2). Among population groups, upper-level salaried employees (11.3) and students (10.1) were most optimistic. Unemployed persons (-4.5) and pensioners (-2.7) still had the most pessimistic expectations concerning economic development.

Consumer confidence in the economy usually decreases with the person's age, and correspondingly the confidence typically increases as income grows. Men are likely to have better confidence in the economy than women. More detailed information is available in the [Database tables](#).

### EU results

The (seasonally adjusted) survey results concerning economic expectations for all EU countries are released monthly on the European Commission website: [Press releases](#).

### Concepts

The **balance figures** are obtained by deducting the weighted proportion of negative answers from that of positive answers. The **consumer confidence indicator** (CCI/A1) is the average of the balance figures for the CCI components. The components of the CCI are: consumer's own economy now (B1), consumer's own economy in 12 months (B2), Finland's economy in 12 months (B4) and consumer's spending money

on major purchases in the next 12 months compared to the past 12 months (E1). The balance figures and the confidence indicator can range between -100 and +100 – the higher balance figure, the brighter the view on the economy.

# 1. Examination of response distributions

## **Consumers' own and Finland's economy**

In June, 56 per cent of consumers thought that Finland's economy was now worse than a year ago and 18 per cent of consumers felt that it was better. Fifteen per cent of consumers thought that their own economy is at the moment worse than one year ago. Clearly more consumers or 28 per cent considered their own economy stronger in June than one year ago. The proportions concerning consumers' own economy were 19 and 27 per cent in May and 19 and 24 per cent one year ago.

In June, as many as 44 per cent of consumers believed that Finland's economic situation would improve in the coming twelve months, while 26 per cent of them thought that the country's economy would deteriorate. One month previously, the corresponding proportions were 40 and 28 per cent and in last year's June 32 and 43 per cent.

In all, 27 per cent of consumers believed in June that their own economy would improve and 10 per cent of them feared it would worsen over the year. In May, the corresponding proportions were 30 and 10 per cent and twelve months ago 27 and 13 per cent.

## **Unemployment and inflation**

As many as 41 per cent of consumers expected in June that general unemployment in Finland would decrease over the next year, while 30 per cent of them believed it would increase. In May, the respective proportions were 39 and 36 per cent and twelve months ago 24 and 57 per cent.

In June, nine per cent of employed persons believed that their personal threat of unemployment or temporary lay-off had lessened over the past few months, whereas 16 per cent thought it had grown. On the other hand, as many as 47 per cent of employed persons felt that they were not threatened by unemployment or temporary lay-off at all. One month earlier these three proportions were 7, 19 and 43 per cent, and in June last year 3, 37 and 36 per cent.

Consumers estimated in June that consumer prices would go up by 2.8 per cent over the next 12 months. One year ago, the predicted inflation rate was 2.4 per cent and its long-term average is 2.9 per cent.

## **Saving and taking out a loan**

In June, 64 per cent of consumers thought the time was favourable for saving. Twelve months ago, the proportion was only 50 per cent. In June, 65 per cent of households had been able to lay aside some money and 77 per cent believed they would be able to do so during the next 12 months.

In June, 58 per cent of consumers regarded the time good for taking out a loan. One year earlier, the corresponding proportion was only 43 per cent. In June, 19 per cent of consumers were planning to take out a loan within one year. The average long-term proportion is 16 per cent.

## **Use of money**

In June, 35 per cent of consumers considered the time favourable for buying durable goods. Eighteen per cent of consumers planned on increasing and 27 per cent on reducing their spending on durable goods over the next 12 months.

In June, more consumers than usual, or 18 per cent, were either definitely or possibly going to buy a car during the next 12 months. In June, considerably many also considered buying a dwelling within a year: 15 per cent of consumers. The long-term average of intentions to buy a car is 14 per cent and that of intentions to buy a dwelling 13 per cent. In addition, as many as 22 per cent of consumers were planning to spend money on renovating their dwelling within a year.

## 2. Method of the Consumer Confidence Survey

The Consumer Confidence Survey measures Finnish consumers' confidence in the economy, that is, views and expectations about the development of their own and Finland's general economic situation. The survey also examines consumers' intentions of making major purchases, saving and raising loans. The survey is carried out with a mixed-mode data collection method, i.e. with a web questionnaire and by telephone interviews (CATI). For the Consumer Confidence Survey, answers are given by means of answer options (qualitative survey).

The former name of the Consumer Confidence Survey was the Consumer Survey. Earlier the survey was carried out by means of telephone interviews only. The first interviews were conducted in November 1987. Until 1991, the survey was carried out twice a year, in May and November. In 1992, the survey times increased to four: the survey months were February, May, August and November. Since October 1995, the consumer confidence data have been collected monthly on assignment from and partial financing of the [European Commission](#).

### **Sampling and data collection**

The population of the Consumer Confidence Survey comprises 3.9 million persons aged 18 to 74 in Finland. A rotating panel design is applied in the survey. Participants are meant to respond twice within six months. Each month, the target is a random sample of about 2,200 persons, of whom one half are first-timers and one half participate for the second time. The target area of the survey is the whole country and the respondents represent the population in Finland, according to age, gender, area of residence and native language. The data collection period for the survey is the first two or three weeks of the month.

In June 2021, in all, 956 responses were gained. Of responses, 78 per cent came from the web questionnaire. The non-response rate of the survey was 55.9 per cent. This includes those who refused from the survey or were otherwise prevented from participating, as well as those who could not be contacted. Possible over-coverage (dead, inmates of institutions, moved abroad, etc.) is also included in non-response here.

### **Weighting**

The response data of the Consumer Confidence Survey are expanded to the whole population with weighting coefficients. Weighting corrects the effects of non-response and improves the statistical accuracy of the data. The weights are established by using a calibration method (Calmar) and the probability of each observation to be included in the sample. The figures and series presented are not seasonally adjusted.
