

Culture 2013

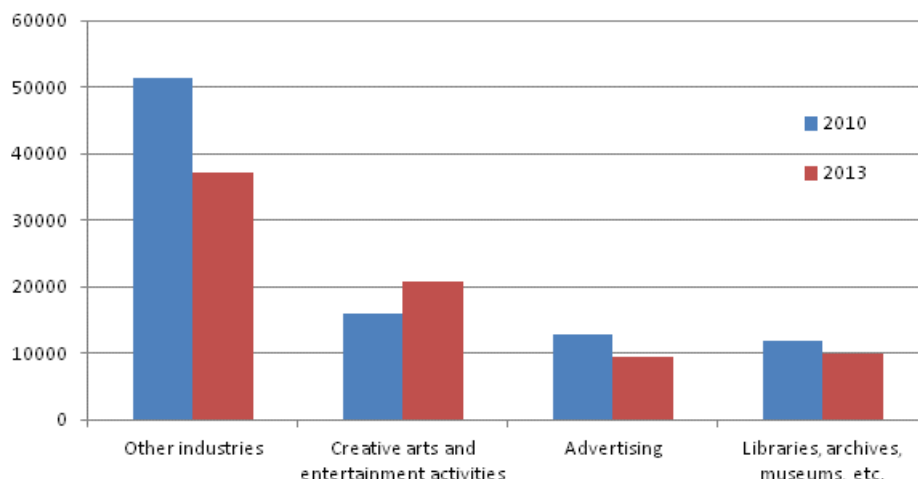

Cultural Employment in Finland

Employment in cultural industries weakened from 2010, even though employment in artistic and literary creation improved

According to Statistics Finland's Labour Force Survey, employment has weakened in cultural industries from 2010 to the end of 2013 by approximately ten per cent. In 2013, the activities employed 112,000 people against around 124,480 in 2010. Creative, arts and entertainment activities form an exception as employment improved from 2010 by nearly 30 per cent and exceeded 20,000 people in 2013. By contrast, employment in advertising fell by over 25 per cent between 2010 and 2013

In the three year period from 2011 to the end of 2013, employment in cultural industries declined by around eight per cent.

Employed labour force in cultural industries in 2010 to 2013

In libraries, archives, museums and operation of historical sites and buildings, employment decreased from 2010 to 2013 by nearly 17 per cent, in publishing by around 15 per cent, and in other cultural industries by over 27 per cent.

Employment in cultural industries has weakened by around five per cent from 2012. Employment has weakened particularly clearly within a year in libraries, archives, museums and operation of historical sites and buildings. In 2012, these activities employed over 13,100 people but in 2013 only close on 10,000.

In the Labour Force Survey, a person is employed if he/she has during the survey week been in gainful employment for at least one hour against monetary pay or fringe benefits, or to make a profit, or has been temporarily absent from work. Employed persons can be employees, self-employed or unpaid workers in enterprises of a family member. The concepts and definitions used in the survey comply with the recommendations of the ILO, the International Labour Organisation of the UN, and the regulations of the European Union on official statistics. The current data content of the Labour Force Survey is based mainly on the EU Regulations concerning Labour Force Surveys (577/98, 2257/2003 and 430/2005). A detailed description of the EU Labour Force Survey is available at:

http://epp.eurostat.ec.europa.eu/portal/page/portal/employment_unemployment_lfs/introduction .

1. Persons employed in cultural occupations as their main job according to the Labour Force Survey

The Labour Force Survey is a sample survey based on interviews and it includes some bias caused by the method. Culture consists of fairly small groups by their activities and occupational groups and therefore this survey presents results separately only when the size of the group is around 10,000. Then the standard error for the result is about four per cent.

In cultural industries, employment has contracted by more than ten per cent from 2010 to 2013 and the number of employed persons working in main jobs was around 111,900 in 2013 (Table 1).

Table 1. Persons employed in cultural industries according to the Labour Force Survey in 2010 to 2013

TOL2008	2010	2011	2012	2013
Publishing	16 611	17 167	17 238	14 109
Advertising	12 738	10 431	10 414	9 482

Total	124 483	121 581	117 867	111 912

Source: Cultural statistics 2013. Statistics Finland

Creative, arts and entertainment activities in turn increased heavily from 2010, and there were already around 20,800 employed persons in these activities at the end of 2013. From 2012 to 2013, employment improved by over 11 per cent.

Employment in other cultural industries dropped by over 27 per cent from 51,000 in 2010 to around 37,000 employed persons in 2013.

2. Persons employed in cultural occupations as their main job according to employment statistics

Employment statistics are annual statistics providing data by region on the population's economic activity and employment. The population for the statistics is the permanently resident population in the country on the last day of the year. Employment statistics are based on register data and contain information on employment relationships insured by the employer, on the basis of which employment and unemployment are deduced.

The number of employed persons in the employment statistics differs from the figures of the Labour Force Survey due to the view of inspection. The advantage is that the statistics cover the total population and thus detailed information can also be provided. Its drawback is that the compilation is a laborious process, which means that the results are not as up-to-date as those of the Labour Force Survey.

In this survey, more detailed data are examined relative to gender, employer sector and level of education and the main emphasis is on the development of employment in individual occupations.

According to the employment statistics, approximately 86,000 persons were employed in cultural activities at the end of 2011. The growth from the year before amounted to around 2.8 per cent.

In 2011, some 11,300 persons were working in artistic occupations and as authors. In these occupations, the number of the employed grew by over 1,700 persons from 2010.

Altogether, 33 per cent of those working in cultural occupations had upper secondary level qualifications, 14 per cent lowest level tertiary qualifications, 22 per cent lower tertiary degrees, and 28 per cent higher tertiary degrees. More than one per cent of those working in cultural occupations had doctorate or equivalent level tertiary education (Appendix figure 1).

Of employer sectors, nearly 60 per cent of all employed persons worked in the private sector. The second highest number, over 15 per cent, work in the local government sector. (Appendix figure 2).

3. Definition of culture from the data file

Cultural industries are the industries of the Standard Industrial Classification 2008 listed in Appendix table 1.

Cultural occupations are the occupations of the Classification of Occupations 2010 listed in Appendix table 2.

4. Data and classifications

The Labour Force Survey collects statistical data on the participation in work, employment, unemployment and activity of persons outside the labour force among the population aged between 15 and 74. The Labour Force Survey data collection is based on a random sample drawn twice a year from Statistics Finland's population database. The monthly sample consists of some 12,000 persons and the data are collected with computer-assisted telephone interviews. Based on the information provided by the respondents, a picture emerges of the activities of the entire population aged between 15 and 74. A so-called ad hoc module with annually changing topics is also carried out in connection with the Labour Force Survey.

The Labour Force Survey produces monthly, quarterly and annual data on employment, unemployment, different employment relationships, working hours and work input, for example. The activity of the population outside the labour force is also examined. Data are available by gender, level of education, age and area. In addition, the Labour Force Survey contains data reported annually on the employment of households. The majority of the data collected are required by the EU regulation. The basic data are confidential.

Employment statistics are annual statistics providing data by region on the population's economic activity and employment. The population for the statistics is the permanently resident population in the country on the last day of the year. The data are mainly derived from administrative registers and statistical data files. The unit-specific data of the employment statistics are confidential by virtue of the Statistics Act. Data can be compiled by all regional divisions based on municipalities and co-ordinates and by postal code areas.

The produced data describe the population's main type of activity, business distribution, status in occupation, number of workplaces, location of workplace, and education and income of the population and labour force.

The statistics are produced yearly. The reference period of the statistics is the last week of the year, but the statistics also contain data accumulated during the statistical reference year (e.g. income data, months of employment and unemployment).

The statistics are compiled by all regional divisions based on municipalities, such as the whole country, province, region, sub-regional unit and municipality. Data can also be produced by postal code area and divisions based on map co-ordinates, e.g. by municipal sub-area. Apart from regional classifications, classifications of industries, sectors, occupations, levels of education and socio-economic groups are also used in these statistics.

These statistics are based on around 40 administrative and statistical data files. The most important data sources are the Population Information System of the Population Register Centre, registers of the Tax Administration, employment registers of the Finnish Centre for Pensions, the State Treasury and the Local Government Pensions Institution, Statistics Finland's Register of Enterprises and Establishments, the pensioner registers of the Social Insurance Institution and the Finnish Centre for Pensions, the Ministry of Labour's Register of Jobseekers, Statistics Finland's Register of Completed Education and Degrees; and the Conscripts Register of the General Staff of the Armed Forces. In addition, questionnaire inquiries are conducted among multi-establishment enterprises and member corporations of municipalities.

Preliminary data are completed around 12 months from the end of the reference period. Of the final data, those on the population's main activity and occupational status are completed approximately 18 months and the remainder 22 months after the end of the reference time period. The data are available starting from 1987.

The Labour Force Survey data collection is based on a random sample drawn twice a year from Statistics Finland's population database. The size of the sample is approximately 12,000 persons per month. The data are collected with a telephone-assisted telephone interview. One respondent is interviewed altogether five times. Monthly, quarterly and annual data are available starting from 1959. Starting from 1989, there are uniform time series complying with the definitions of the International Labour Organisation (ILO).

The Labour Force Survey results contain bias caused by the sample survey, which is higher the smaller occupational group it concerns. People employed in cultural occupations are in this review combined into

groups whose size is around 10,000 persons. Then the standard error for the estimate is approximately four per cent.
